## Fuel tank connectors

### Fuel tank components

Splice the provided fuel pump plug into the harness in place of the Subaru plug. If you did not mark it on disassembly you can use the top of the sending unit plate to locate the correct plug and wire locations.

The Subaru used two fuel level senders. In order to work correctly one of the sender wires is not used and the two wires must be connected together using solder and tape.

Splice the fuel level sender into the factory harness in place of the old Subaru unit.
